

PRODUCT OVERVIEW & ROADMAP

Standby.

The stage manager's prompt book, reimagined for the rehearsal room.

One calm, local-first home for the company, the calendar, the cues, and the reports. It runs on whatever device is already in your hands.

Built for stage managers everywhere, from Off-Off-Broadway (OOB) black boxes to Actors' Equity Association (AEA) houses.

Standby is a digital prompt book: one quiet place for everything a stage manager carries from show to show, cross-referenced and ready in the room, on the iPad, the laptop, or a phone.

1

One place for everything

Nine linked modules replace a binder and a stack of spreadsheets, all cross-referenced.

- › Calls know who is cast
- › Conflicts flag against calls
- › Cue-to-cue appears at tech
- › Switch shows in one tap

2

Offline and private

No account, no wifi dependency, and no server sitting behind it.

- › Data lives on the device
- › Loads instantly, anywhere
- › One-file backup and restore
- › Nothing leaves the device

3

Paperwork you hand out

The documents a stage manager actually distributes every day.

- › Rehearsal reports as PDFs
- › Printable sign-in and cast lists
- › Calendar export to phones
- › Email a report in one tap

Why Standby, Not Five Other Tools

02

Most stage managers stitch together a spreadsheet, a calendar, a document, and a stack of paper. Standby covers all of it, in the field’s own language.

CAPABILITY	STANDBY	SPREADSHEETS & DOCS	GENERIC PM APPS	SAAS PLATFORMS
Everything in one place	✓	✗	~	~
Works fully offline	✓	~	✗	✗
No account or login	✓	~	✗	✗
No subscription fee	✓	✓	~	✗
Built for theater work	✓	✗	✗	~
One link, any device	✓	~	✓	✓
Data stays on your device	✓	✓	✗	✗

✓ built in · ~ partial or do-it-yourself · ✗ not really

Standby earns its place on an ordinary week, not just on paper. Here is how it shows up in the room, drawn straight from what the app does today.

The wifi is down during tech

Because the whole prompt book lives on the iPad, the cues, contact sheet, and schedule are all still right there. Nothing waits on a connection.

✓ Nothing skips a beat

An actor is running late at 6:25

Mark them Late once in Attendance. It already flows onto the sign-in sheet and into tonight's report, so there is no second spreadsheet to update.

✓ Logged once, everywhere

A designer needs contacts tonight

Print the cast list or export a CSV in a single tap, with no login and no digging through a shared drive for the latest version.

✓ Sent in one tap

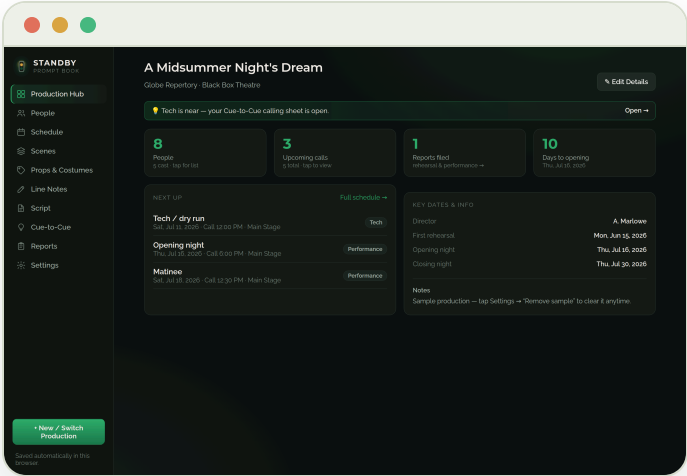

You sub in on a running show

The outgoing stage manager sends one backup file. Import it, and the entire prompt book, from cues to conflicts, is yours in seconds.

✓ Up to speed in seconds

The through-line: enter something once, and it flows everywhere it belongs, wifi or not.

INTERFACE · 1

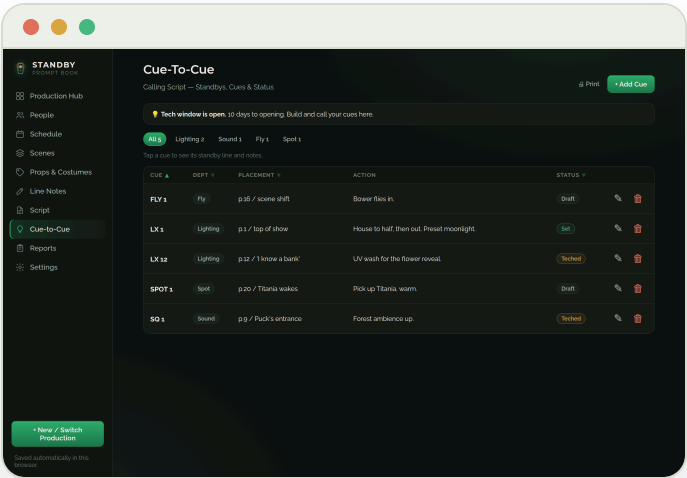

Production Hub

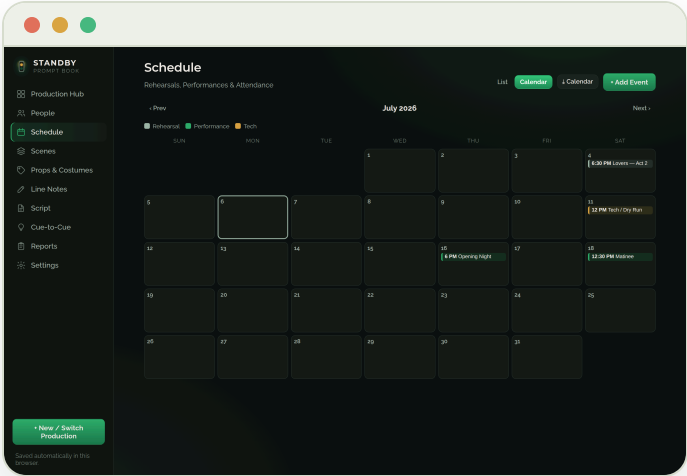

The Production Hub is the show's home screen. Tappable tiles surface the headline numbers (cast size, upcoming calls, reports filed, and days to opening), while "Next Up" lists the coming calls and "Key Dates" pins the milestones. When tech approaches, a banner links straight to the calling script.

INTERFACE · 2

Cue-to-Cue Calling Script

The Cue-to-Cue view holds every standby, cue, placement, action, and status in one sortable table. Department filters let the caller isolate a single track, and each cue moves from Draft to Teched to Set as the sequence is built. It appears automatically as tech week nears.

INTERFACE · 3

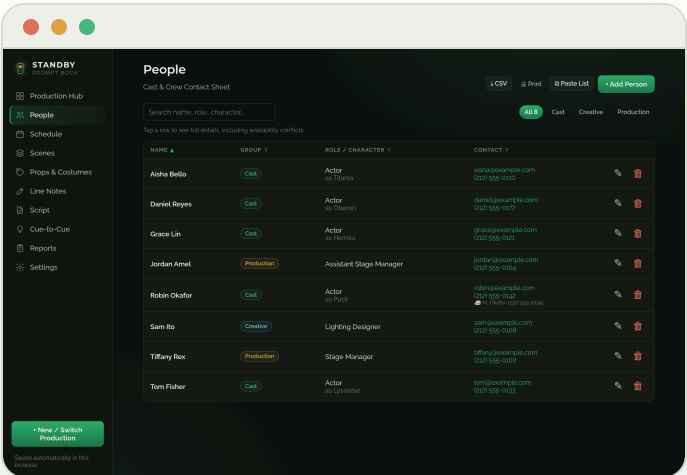

Schedule & Calendar

The Schedule shows the whole production month at a glance, color-coded by event type with a legend. Rehearsals, tech, and performances each read instantly, and tapping any date opens that call. The same events export to the company's phones as a calendar file.

INTERFACE · 4

People & Contact Sheet

People is the cast and crew contact sheet. Each row carries the person's group, role or character, contact details, and emergency contact, and the list sorts and filters instantly. It prints as a clean cast list and exports as a CSV.

Roadmap, Toward a Full-Fledged App

Standby today is a complete single-user prompt book. The next phases add the shared, connected layer of sync, collaboration, and a company model. The timeline is indicative.
